

Updated Debug Tips for Pybullet on Mac

Due to recent updates on Mac related to Mojave, when installing Pybullet some users have reported an issue during the pip installation.

In order to resolve the error please make sure that xcode is installed and updated – you can run the following:

```
xcode-select --install
```

Once xcode is installed please restart the machine and then re-try the installation with pip:

```
pip install pybullet==2.0.8
```

If the issue persists you can also run:

```
conda update navigator-updater
```
